

# Our stance on cracked accounts

**Tori Client will NEVER support cracked Minecraft accounts in order to uphold both legal and security standards.**

We understand there is a large market for performance-focused cracked clients, however by focusing solely on licensed accounts, we are following Minecraft's end-user license agreement, thereby respecting intellectual property rights and encouraging support for the official game. This not only reduces potential legal issues, as cracked Minecraft is considered piracy, but it also enhances the overall user experience by reducing vulnerabilities often associated with cracked versions, such as increased risk of security breaches and stability issues. By only supporting licensed accounts, we also ensure that your data at Tori Client is extra secure by having your Microsoft account be another layer of protection from bad actors. In short, this policy helps ensure that all users enjoy a more reliable, secure, and ethically sound gaming experience.

**Please do not come into our community begging for cracked support. It has been stated both on the download page, and in multiple channels across our Discord server that we will NEVER support cracked. Thank you.**
